Q no 1:

PAC Chart.

INPUT	OUTPUT
• Number of guests (N) • For each guest: - Season (Season: "Peak" or "Off-Peak") - RoomType (RoomType: "Standard", "Deluxe", or "Suite") - Number of Nights (M)	• For each guest - Hotel Price (F-P) • Overall - Total Hotel revenue (Total Revenue).
PROCESSING REQUIRED	SOLUTION ALTERNATIVE
• Initialise Total Revenue = 0 • Read N • Loop i from 1 to N: - Read Season, RoomType, and M. - Determine rate using nested Conditions. • If season == "Peak" - Standard = 5000, Deluxe = 8000, Suite = 12000 • If season == "Off-Peak" - Standard = 3000, Deluxe = 5000, Suite = 8000 • Calculate Price = Rate * M • If M > 7 Price * 0.15 - Else D = 0	- Decisions can be structured using nested if-else or SWITCH / CASE selection.

Dated: _____

- Compute final bill : $FP = Price \cdot P$
- Print Final Price (FP)
- Calculate Total Revenue =
Total Revenue + FP
- Print Total Revenue after loop
finishes.

GPO Chart:-

INPUT	PROCESS	Output
- N (Total guests) - season - Room type - M (Nights stayed)	1) Initialize Total Revenue = 0 2) For each guest ($i = 1$ to N) a. Input Season, Room-type, M b. Determine Rate based on Season and Room type c. Calculate Price = Rate * M d. If $M > 7$ then $D = Price * 0.15$, else $D = 0$ e. Calculate $FP = Price - D$ f. Display FP g. Total Revenue = Total Revenue + FP 3) Print Total Revenue.	- Final Price (FP) - Total Revenue
